## DETAILED ACTION

### Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claim 20 is rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1 of U.S. Patent No. 6,687,409. Although the conflicting claims are not identical, they are not patentably distinct from each other.

Art Unit: 2621

Regarding claim 20 of instant application and claim 1 of U.S Patent 6,687,409, claims recite:

receiving coded image data and tool information indicating tools for constituting decoding algorithm for decoding the coded image data (claim 20 of instant application, lines 2-4) which is same as receiving coded image data and tool information indicating functional tools for constituting decoding algorithm for decoding the coded image data (U.S. Patent No. 6,687,409, claim 1, lines 3-5);

storing previously defined tools (claim 20 of instant application, lines 5-6) which is same as storing previously defined functional tools (U.S. Patent No. 6,687,409, claim 1, lines 6-7),

individually selecting at least one tool from the stored previously defined tools based on the tool information (claim 20 of instant application, lines 7-8) which is same as individually selecting at least one tool from the stored previously defined tools based on the tool information (U.S. Patent No. 6,687,409, claim 1, lines 8-9),

constructing the decoding algorithm from the at one selected tool (claim 20 of instant application, lines 9-10) which is same as decoding algorithm constructed from at least one selected tool (U.S. Patent No. 6,687,409, claim 1, lines 12-13)

decoding the received coded image data by applying the decoding algorithm (claim 20 of instant application, lines 10-11) which is same as (decoding the received coded image data by applying the decoding algorithm (U.S. Patent No. 6,687,409, claim 1, lines 10-11),

Art Unit: 2621

outputting decoded image data to a display device (claim 20 of instant application, line 12) which is same as outputting decoded image data to a display device (U.S. Patent No. 6,687,409, claim 1, line 14).
